

Advanced AI Course

Ready to go beyond basic ChatGPT? This intensive follow-up course takes you from simple AI experiments to building custom AI assistants and agents that work autonomously for you. Learn "vibe coding" to create prototypes without programming, and prepare for the agentic AI revolution.

◆ About the course

Have you used generative AI to summarise text or draft simple content, yet feel you're not unlocking its full potential for your own work? And how do you prepare for the next big leap in AI – intelligent agents?

This follow-up course is designed to help you master advanced prompting, create tailor-made AI assistants, and understand as well as design AI agents that can proactively handle complex tasks. You'll also discover vibe coding: letting AI act as your "digital creator" to build quick prototypes and digital solutions without traditional programming.

◆ Agenda at a glance

- Generative AI refresher
- Risks with GenAI & advanced prompting
- Build your custom AI assistant (GPT)
- Agentic AI fundamentals
- Create your first AI-agent
- Prototype with vibe coding
- Future trends of AI

This is an intensive course blending short lectures with live demos, group discussions and practical exercises.

◆ Who is it for?

- GenAI user ready for next level
- Beginners that have completed an intro course
- Teams wanting custom AI solutions
- Leaders who want to future proof their teams
- Consultants ready to create their own agents

◆ What you'll learn

- Advanced prompting techniques
- How to create your custom AI assistant (GPT)
- Agentic AI fundamentals & your own AI agent
- How to prompt your first no-code prototype
- Future-ready skills to put you ahead of the curve

◆ Practical details

- Format: In-person, online, or hybrid
- Duration: Half or full day session
- Group size: 6-25 participants
- Language: Swedish or English
- Investment: From 45 000 SEK
