

AI Adoption Accelerator

You already pay for Microsoft 365 Copilot—now let it create value for you. Over six weeks we deliver leadership vision, adoption planning, team-tailored courses and effect measurement to achieve >70% regular usage within 90 days.

◆ What's in it for us?

Most companies are wasting their AI investments. You're already paying licence fees, but are you getting the value? Industry reports consistently show that most companies struggle to achieve high adoption rates - are you one of them?

🔍 Common adoption challenges we see

- Lack of clear AI strategy - Teams don't know when or how to use generative AI
- No structured training - Generic demos don't show role-specific value
- Missing governance - Uncertainty about safe and appropriate use
- No champions network - Early adopters work in isolation
- Poor change management - Launch without supporting organizational changes

💰 What's really at stake?

It's not just the licence fees you're wasting, it's your competitive edge. Your best employees might be recruited away, clients will question your capabilities, and you will fall behind in every metric that matters. The real cost? Becoming irrelevant while others transform their entire business advantage.

If you're already committed to generative AI - it's time to invest in AI adoption and make sure you put yourself in the leadership position and motivate your employees to create their best work with you!

◆ Who is it for?

- Companies already investing in GenAI
- Organisations with 50–5000 licences
- Leadership, IT & HR teams
- Companies wanting faster ROI

◆ What you get

- Leadership kickoff & AI vision session
- Current state analysis - know where you stand today
